Bedridden patients can drink hands-free

AQUAMIKE KIT

Drink as you wish with no need for assistance

AQUALAMP

Light & Life

Drink independently

Aquamike is a simple device that allows non-sufficient patients, elderly and disabled to drink at anytime, with no need for help from healthcare operators or family members.

Aquamike's bottle with scale allows to keep track of the consumption of any beverage, either hot or cold.

Aquamike gives the patient freedom to drink at his own pace thus enhancing his **hydration** state.

People with muscular dystrophy or reduced mobility, injured and bedridden, affected by Parkinson, arthritis, ictus or tetraplegia will find that Aquamike will be an ideal ally.

Aquamike saves **one hour a day** to hospital staff for each patient.

Aquamike may be easily fixed to any bed or wheelchair thanks to its universal clamp that can rotate 360 degrees.

Aquamike is easy to clean and **ecological** since it eliminates plastic cups' use.

Designed and built in Italy with high quality materials, Aquamike has been nominated "Product for Social Community 2013"
